

# Sprint Retrospectives

## Sprint 1

- What went well:
  - Team completed required tasks in accordance to schedule before attending sprint meet-up.
  - Discussion and problem-solving of issues were dealt with by all members and not just individually.
  - Tested the webpage and redesigned any impurities.
  - Ideas of selecting a new platform were thoroughly discussed
    - Transition from WIX to Javascript based framework.
- What could be improved on:
  - Time management on how long each individual member has worked on their respective duties should be logged within Trello.
  - The frequency on how often GIT was updated.
  - The usage of other additional functions of GIT like branching and merging should be integrated as part of the workflow practise.
  - Changes should strictly follow according to what is stated in the user stories. (No assumptions made by ourselves)
  - Integrate all documentations of responsibilities, logging and changes only within Trello.
  - User stories should be verified before implementation. (User stories must be correct)
- What will we commit to improve in the next Sprint:
  - Active interaction with the usages of GIT.
  - Stand-up meetings times will have to be more regularized and scheduled.
  - Streamline all tasks and responsibilities within Trello.
  - Ensure and quality check implementations are strictly in accordance with the user stories.
  - Ensure that user stories accurately reflect the requirements needed.
- What questions that remain:
  - Is WIX an acceptable platform for our project to be continued deeper on. (Further discussions needed with Lecturer)
  - The lack of source coding, debugging and testing units to be uploaded onto GIT, as WIX handles most issues internally.

## **Sprint 2**

- What went well:
  - Team-coordination and task completion was excellent.
  - Developed all necessary requirements with strict adherence to the user stories.
  - Client enjoyed the showcase of the current product.
- What could be improved on:
  - Total time spent by individual members on each Sprint should be recorded in an Excel spreadsheet for accurate time tracking.
  - Sprint goals should reflect the product promises to the Client.
  - Commit messages on GitLab should be more detailed and specific.
- What will we commit to improve in the next Sprint:
  - The practice of constructing more detailed comments for GitLab commits.
- What questions that remain:
  - None for this sprint.

## **Sprint 3**

- What went well:
  - Team-coordination and task completion was excellent. Successfully managed to demonstrate the product to our client who was very pleased with the product itself
- What could be improved on:
  - Organizing the management for files where everything should be accessible from one location
  - User stories in product backlog should be moved to done
  - More informative comments in git push
- What questions that remain:
  - None for this sprint
